PROJECTS / OPEN-SOURCE

LOOK BASED MEDIA PAYER   Python

This is done using the camera or webcam on top of the computer. As long as the camera detects the users face looking at it, the media is played. The player pauses as soon as users face is not completely seen. The look based media player does not allow user to miss a single part of the media user is watching. The system user camera to sense if user is looking at it, the system pauses the media being played as soon as it detects user is not looking at it.

PORTFOLIO   HTML, CSS, Javascript

The portfolio project is a personal website that showcases my skills, projects, and accomplishments in a visually appealing and organized way. The website includes a home page that provides an introduction and overview of my work, as well as sections for my portfolio, about me, and contact information.
